## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see filed 06/04/2008, with respect to the rejection(s) of claim(s) 1-5, 8, 10-15, 18, and 20-25 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Wick (6,691,162), Quillen (7,266,776) et al., and Ogle et al. (6,430,604).

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4, 8, 10-14, 18, and 20-21 are rejected under 35 U.S.C. 103(a) as being unpatentable by Wick (6,691,162) in view of Quillen (7,266,776), hereinafter referred to as Quillen.

4. Regarding claims 1, 11, and 21, Wick disclosed displaying a user selectable list of subscribers of an instant messaging service; selecting a subscriber in an inactive state from the list (column 5, lines 6-55 and Fig. 5), designating at least one action associated with the [subscriber], the at least one designated action to be automatically

Art Unit: 2141

performed with respect to each subscriber in the group in response to a state change (column 5, lines 6-55 and Fig. 5 and 4); automatically detecting a state change of at least one of said subscribers in said group (column 5, lines 6-55 and Fig. 5).

However, Wick does not explicitly teach selecting a group of subscribers within a list, designating at least one action with the group, the at least one designated action to be automatically performed with respect to each subscriber in the group in response to a state change, automatically executing said designated action associated with said group for said at least one subscriber responsive to said detecting step. Quillen teaches selecting a group of subscribers within a list (column 10, lines 35-40 and column 12, lines 36-50), designating at least one action with the group (column 10, lines 35-40 and column 12, lines 36-50), the at least one designated action to be automatically performed with respect to each subscriber in the group in response to a state change (column 10, lines 35-40 and column 12, lines 36-50), automatically executing said designated action associated with said group for said at least one subscriber responsive to said detecting step (column 10, lines 35-40 and column 12, lines 36-50). It would have been obvious to one of ordinary skill in the art at the time of the invention to include the features as taught by Quillen in the system of Wick because both are from the same field of endeavor and in order to “facilitate communications between computer users across a network” (*see title*).

5. Regarding claims 2 and 12, Wick disclosed wherein said action is an instant messaging initiation action that initiates an instant messaging session between said client and said at least one subscriber (column 5, lines 6-55 and Fig. 5).

Art Unit: 2141

6. Regarding claims 3 and 13, Wick disclosed wherein said action includes at least one action selected from the group consisting of a notification action (column 5, lines 6-55 and Fig. 5), a prompting action (column 5, lines 6-55 and Fig. 5), and a message conveyance action (column 5, lines 6-55 and Fig. 5).

7. Regarding claims 4 and 14, Wick disclosed wherein said selecting, said designating, said associating, said detecting, and said executing steps are performed by said instant messaging client (column 5, lines 6-55 and Fig. 5).

8. Regarding claims 8 and 18, Wick disclosed wherein said state change is a change from an inactive state to an active state (column 5, lines 6-55 and Fig. 5).

9. Regarding claims 10 and 20, Wick disclosed presenting within a graphical user interface a list of said subscribers (column 5, lines 6-55 and Fig. 5), and within said graphical user interface (Fig. 4-5), visually distinguishing said at least one subscriber from other subscribers in said list (column 5, lines 6-55 and Fig. 5).

### ***Claim Rejections - 35 USC § 103***

10. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

11. Claims 5 and 15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wick in view of Quillen, further in view of Ogle et al. (6,430,604), hereinafter referred to as Ogle.

Art Unit: 2141

12. Regarding claims 5 and 15, Wick disclosed the invention as described above. However, Wick does not explicitly teach wherein said instant messaging client includes a Lotus Sametime (TM) type client. Ogle teaches wherein said instant messaging client includes a Lotus Sametime (TM) type client (column 1, 20-33). It would have been obvious to one of ordinary skill in the art at the time of invention to include the Lotus Sametime IM client in the system of Wick because both Wick and Ogle are from the same field of endeavor of instant messaging and in order to use Wick's "pounce" with another IM client.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to Applicant's disclosure.

**a. Robinson et al. (6,760,580) teaches organizing subgroups within a buddy list and setting a audiovisual alert for members of a subgroup to go off when those members return online from an inactive state.**
